

Small Town Sanitation

About the Small Town Sanitation

The Small Town Sanitation (STS) project will enable the delivery of improved, equitable sanitation to more than 500,000 people in 10 towns across Cabo Delgado, Nampula, and Zambezia provinces. The lead implementation organisation is PSI.

In households, communities, businesses, and government offices, the project will facilitate the creation of systems, services, and norms that will drive long-term uptake of improved sanitation.

The project's overall goal is to improve the well-being of target communities, especially women and girls, through strengthening the sustainable market of sanitation products and services in small towns.

STS will also promote women's leadership roles and business development in the Water, Sanitation, and Hygiene (WASH) sector.

Programme details

Title: Small Town Sanitation

Country: Mozambique

Target geographical area: Cabo Delgado, Nampula and Zambézia

Donor: USAID

Implementing organisation: PSI (lead organization), Planet Partners, CESC, N'weti and SNV

Project duration: 2022 - 2024

Project value: USD 14.4M

Expected outcomes

- Strengthened local market capacity to provide sanitation products and services to households.
- Increased management capacity for improved public sanitation services.
- Increased household investment for sanitation products and services and improved sanitation and hygiene behaviours.

SNV Key results

- Develop improved, gender sensitive sanitation infrastructure models.
- Support increased access to sanitation in selected small towns by advising the construction of improved

- and resilient public sanitation facilities.
- Develop performance-based management approaches for public sanitation services.
